Survey Questionnaire

Part I. Respondent Profile

Instructions: Please provide the following information by filling in the data or putting a (✓) next to your response.

Name: (Optional) _____

Role: ☐ IT Expert ☐ IT Practitioner

Position/Job Title: _____

Years of IT Experience:

☐ 5–7 years ☐ 8–10 year ☐ More than 10 years

Part II. System Evaluation (ISO 25010)

Instructions: To indicate your agreement level that best describes how you evaluate the system based on ISO 25010 software quality characteristics, put a (✓) in the box that next to each statement below using the coded scale for your response.

Scale	Interpretation	Description
4	Highly Acceptable	The system fully meets the evaluation criterion and performs exceptionally well.
3	Acceptable	The system meets the evaluation criterion and performs satisfactorily.
2	Less Acceptable	The system partially meets the evaluation criterion and requires improvement.
1	Not Acceptable	The system does not meet the evaluation criterion and requires significant improvement.

CRITERIA	4	3	2	1
Functional Suitability- This section evaluates whether the system provides the necessary functions to perform daily tasks.				
1. The system provides all the necessary functions for managing job orders, customer records, inventory, reports, and release schedules.				
2. Each module performs its intended function correctly without producing incorrect results.				
3. The machine learning feature provides service completion date predictions appropriate for the available job order information. <i>generate accurate and relevant service completion date prediction based on availability</i>				
4. The data analytics dashboard provides the information needed for monitoring sales, services, and business performance.				
5. The available system functions support Shoelotskey's daily business operations efficiently.				
Performance Efficiency- This section evaluates whether the system performs tasks quickly and efficiently.				
1. The system loads pages and modules within an acceptable response time.				
2. Job order processing and saving transactions are completed without noticeable delays.				
3. Reports and analytics are generated efficiently even with a large number of records.				
4. The machine learning prediction is generated within a reasonable amount of time.				
5. The system maintains good performance while multiple modules are being used.				
Compatibility- This section evaluates whether the system works properly with other system components and supported platforms.				
1. The system operates properly on commonly used web browsers.				
2. Information entered in one module is correctly reflected in related modules.				
3. <u>The database exchanges information correctly with all system modules.</u>				
4. The machine learning component integrates properly with the job order management module.				
5. The analytics dashboard accurately displays information gathered from the operational modules.				

Information entered in one module is correctly sync w/ the other system module.

Republic of the Philippines
NATIONAL AVIATION ACADEMY OF THE PHILIPPINES
 The National Professional Institution for Aviation
INSTITUTE OF COMPUTER STUDIES

CRITERIA	4	3	2	1
Interaction Capability- This section evaluates whether the system is easy to learn, understand, and use.				
1. The menus, icons, and buttons are clearly labeled and easy to recognize.				
2. I can easily learn how to perform job order, inventory, and customer management tasks.				
3. The system helps users avoid mistakes by providing clear prompts and confirmation messages.				
4. The layout and navigation make it easy to move between different modules.				
5. The system provides helpful messages and guidance whenever users need assistance.				
Reliability- This section evaluates whether the system performs consistently and operates without failures.				
1. The system performs consistently without unexpected interruptions during operation.				
2. Customer, inventory, and transaction records remain accurate after being saved.				
3. The system can recover successfully after unexpected errors or interruptions.				
4. The system continues to operate properly when processing multiple transactions.				
5. The machine learning prediction and analytics functions remain dependable during repeated use.				
Security- This section evaluates whether the system protects data from unauthorized access.				
1. User authentication effectively prevents unauthorized access.				
2. The system restricts access to features based on user roles and permissions.				
3. Customer, transaction, and inventory information are protected from unauthorized viewing or modification.				
4. The system records user activities to support accountability and transaction tracking.				
5. The system provides adequate protection against common security threats affecting web-based systems.				

The system appears secure against common unauthorized attacks.

Republic of the Philippines
NATIONAL AVIATION ACADEMY OF THE PHILIPPINES
 The National Professional Institution for Aviation
INSTITUTE OF COMPUTER STUDIES

CRITERIA	4	3	2	1
Maintainability- This section evaluates whether the system is easy to maintain, update, and improve.				
1. The system is easy to maintain and improve.				
2. Changes to one part of the system do not affect the rest of the system.				
3. Errors and system issues can be identified and analyzed efficiently.				
4. The system design supports future feature enhancements and updates.				
5. The system can be tested efficiently after updates or modifications.				
Flexibility- This section evaluates whether the system can adapt to future changes and business needs.				
1. The system can adapt to future changes in Shoelotskey's business processes.				
2. New services, reports, or features can be added without major changes to the system.				
3. The system can support an increasing number of users, customers, and transaction records.				
4. The system can be installed and configured in similar business environments with minimal effort.				
5. The system can be updated without affecting its normal operation.				
Safety- This section evaluates whether the system helps prevent errors and protects important data.				
1. The system helps prevent accidental loss or deletion of important records.				
2. The system shows a warning before important actions are performed.				
3. The system checks user input before processing transactions.				
4. The system modules work together without causing data errors.				
5. The system helps ensure safe and reliable business operations during daily use.				

The system continuous to function correctly after update or modification.

Survey Questionnaire

Part I. Respondent Profile

Instructions: Please provide the following information by filling in the data or putting a (✓) next to your response.

Name: (Optional) _____

Position at Shoelotskey: ☐ Owner ☐ Staff

Part II. Technology Acceptance Model (TAM) Evaluation

Instructions: Please read each statement carefully. Put a (✓) in the box that best shows how much you agree with each statement based on your experience using the Web-Based Service Management System for Shoelotskey Villamor-Pasay"

Scale	Interpretation	Description
4	Highly Acceptable	The system fully meets the evaluation criterion and performs exceptionally well.
3	Acceptable	The system meets the evaluation criterion and performs satisfactorily.
2	Less Acceptable	The system partially meets the evaluation criterion and requires improvement.
1	Not Acceptable	The system does not meet the evaluation criterion and requires significant improvement.

CRITERIA	4	3	2	1
Perceived Usefulness (PU)- This section evaluates whether the system helps users perform their tasks more effectively and efficiently.				
1. The system helps me finish my work faster.				
2. The system makes it easier to manage customer records and job orders.				
3. The system helps me keep track of inventory and services more easily.				
4. The reports help me understand sales and business performance.				
5. The system helps me do my work better.				

Republic of the Philippines
NATIONAL AVIATION ACADEMY OF THE PHILIPPINES
 The National Professional Institution for Aviation
INSTITUTE OF COMPUTER STUDIES

CRITERIA	4	3	2	1
Perceived Ease of Use (PEOU)- This section evaluates whether the system is easy to learn and use.				
1. The menus, buttons, and labels are easy to understand.				
2. The system is easy to learn.				
3. It is easy to enter and update information in the system.				
4. It is easy to find the information I need.				
5. The system is easy to use.				
Behavioral Intention to Use (BI)- This section evaluates the user's willingness and intention to continue using the system.				
1. I am willing to use the system in my daily work.				
2. I will continue using the system if it is officially used in the business.				
3. I would recommend the system to my co-workers.				
4. I would rather use this system than the old way of doing the work.				
5. I believe this system should continue to be used at Shoelotskey.				
Actual System Use (ASU)- This section evaluates how often and how consistently the user uses the system in daily work.				
1. I use the system whenever I perform my assigned tasks.				
2. I use the system to record and manage customer job orders.				
3. I use the system to check inventory, service status, or reports when needed.				
4. I can complete my work using the system without going back to the old manual process.				
5. I use the system regularly to help me complete my daily work.

PART III. Comments and Suggestions

Instructions: Please provide your comments and recommendations regarding the developed system.

1. Which feature or component of the system do you think performs best? Why?

2. What weaknesses or issues did you observe during your evaluation?

3. What improvements do you recommend to enhance the system's quality in terms of functionality, performance, security, maintainability, or other software quality characteristics?

4. Are there additional features or enhancements that you would recommend for future versions of the system?

5. Other comments or suggestions:

"We assure you that your responses will be treated with the utmost confidentiality and used strictly for academic purposes."

SURVEY INSTRUMENT VALIDATION RATING SCALE

Instructions: Please indicate your degree of agreement or disagreement on the statements provided below by checking the box which corresponds to your best judgment.

Capstone Title: A WEB-BASED SERVICE MANAGEMENT SYSTEM WITH DATA ANALYTICS USING MACHINE LEARNING ALGORITHMS FOR SHOELOTSKEY VILLAMOR-PASAY

Researchers:

- 1) Charmaine Rose G. Angeles
- 2) Kylane C. Gravino
- 3) Melody D. Sedanto

Scale: 5 – Highly Acceptable

4 – Acceptable

3 – Neutral

2 – Less Acceptable

1 – Not Acceptable

	Criteria	5	4	3	2	1
1	The survey items are relevant to achieving the objectives of the study and the system's goal of improving service management operations for Shoelotskey Villamor-Pasay.		✓			
2	The survey items are aligned with the proposed system's core functions, including job order management, service monitoring, inventory management, data analytics, and machine learning-based service completion prediction.		✓			
3	The survey contains an appropriate number of items for evaluating the major features and functionalities of the Web-Based Service Management System.		✓			
4	The survey items are comprehensive and adequately cover the intended aspects of the developed system without being too narrow or too broad.		✓			
5	The survey covers the ISO/IEC 25010 software quality characteristics relevant to evaluating the developed system.	✓				
6	The survey includes appropriate items for measuring user acceptance based on the Technology Acceptance Model (TAM), including perceived usefulness, perceived ease of use, behavioral intention to use, and actual system use.		✓			

Republic of the Philippines
NATIONAL AVIATION ACADEMY OF THE PHILIPPINES
 The National Professional Institution for Aviation
INSTITUTE OF COMPUTER STUDIES

	Criteria	5	4	3	2	1
7	The survey items and response choices are designed to produce consistent, reliable, and measurable responses relevant to evaluating the Web-Based Service Management System with Data Analytics Using Machine Learning Algorithms for Shoelotskey Villamor-Pasay.		✓			
8	The terminology, language, and concepts used in the survey are appropriate, understandable, and relevant for Shoelotskey management, staff, and IT evaluators.		✓			
9	The layout and structure of the survey instrument are logically organized, visually clear, and technically sound.		✓			
10	The wording of the survey items is clear, precise, and understandable to the intended respondents.		✓			
11	The total number of survey items is appropriate and can be completed within the allotted time without causing respondent fatigue or disengagement.		✓			
12	The response scale provides an appropriate measure of the respondents' evaluation of the developed Web-Based Service Management System.		✓			
13	The survey instrument provides an accurate basis for evaluating the Web-Based Service Management System with Data Analytics Using Machine Learning Algorithms in relation to the objectives of the study.		✓			
14	Overall, the survey instrument is suitable for evaluating the effectiveness, quality, and user acceptance of the Web-Based Service Management System with Data Analytics Using Machine Learning Algorithms for Shoelotskey Villamor-Pasay.		✓			

Comments and Suggestions:

USE APPROPRIATE IT TERMINOLOGY IN THE TECHNICAL EXPERT SURVEY, PARTICULARLY TERMS THAT ARE FAMILIAR AND UNDERSTANDABLE TO IT PROFESSIONALS. THE SURVEY SHOULD ALSO CLEARLY EXPLAIN THE ROLE AND FUNCTION OF MACHINE LEARNING WITHIN THE SYSTEM, INCLUDING HOW THE ML MODEL PROCESSES DATA, IDENTIFIES PATTERNS, GENERATE PREDICTION OR RECOMMENDATION AND SUPPORT SYSTEM DECISION-MAKING. THIS WILL PROVIDE IT EXPERTS WITH SUFFICIENT TECHNICAL CONTEXT TO UNDERSTAND THE SYSTEM'S FUNCTIONALITY AND ENABLE THEM TO EVALUATE AND ANSWER THE SURVEY QUESTIONS ACCURATELY.

Dear Respondent,

Greetings!

We are fourth-year Bachelor of Science in Aviation Information Technology (BSAIT) Section 2 students from the National Aviation Academy of the Philippines, conducting our capstone project entitled: **"A Web-Based Service Management System with Data Analytics Using Machine Learning Algorithms for Shoelotskey Villamor-Pasay"** As part of our study, we respectfully invite you to evaluate the developed system. Your responses will help us assess the system's perceived usefulness, perceived ease of use, behavioral intention to use, and actual system use. Your feedback will provide valuable information for improving the system and determining its overall acceptability.

Your participation is entirely voluntary. You may choose not to answer any question or withdraw from the evaluation at any time without any penalty. All information you provide will be kept confidential and will be used solely for academic and research purposes.

Respectfully,

Charmaine Rose G. Angeles
Researcher

Kylane C. Gravino
Researcher

Melody D. Sedanto

Dear Mr. Apostol,

We hope this letter finds you well. We respectfully request your assistance in reviewing and validating the survey questionnaire for our capstone project entitled **"A Web-Based Service Management System with Data Analytics Using Machine Learning Algorithms for Shoelotskey Villamor-Pasay."** The questionnaire has been developed to collect valuable feedback that will help improve the system's features and ensure that it effectively meets the needs of its intended users. Your evaluation will also help verify that the research instrument aligns with the quality characteristics of the ISO/IEC 25010 Software Quality Model, particularly in terms of functional suitability, performance efficiency, compatibility, interaction capability, reliability, security, maintainability, flexibility, and safety. In addition, the questionnaire includes the Technology Acceptance Model (TAM) to evaluate perceived usefulness, perceived ease of use, behavioral intention to use, and actual system use of the developed system.

Given your expertise and experience in the field, your comments and recommendations will be invaluable in ensuring the questionnaire's clarity, relevance, and effectiveness. Your insights will greatly contribute to enhancing the reliability and validity of our research instrument. We sincerely appreciate your time, support, and consideration. Thank you for helping us strengthen the quality of our study.

<Date>
Dear Respondent, *Not bold*

Greetings!

We are fourth-year Bachelor of Science in Aviation Information Technology (BSAIT) Section 2 students from the National Aviation Academy of the Philippines, conducting our capstone project entitled: **"A Web-Based Service Management System with Data Analytics Using Machine Learning Algorithms for Shoelotskey Villamor-Pasay"**

As part of the system evaluation, we respectfully invite you to evaluate the developed system. Your honest responses will help determine the quality and acceptability of the system and will serve as valuable input for improving its functionality and overall performance. Your participation is voluntary. You may decline to answer any question or withdraw from the evaluation at any time without any penalty.

Respectfully,

Charmaine Rose G. Angeles *bold*
Researcher

Kylane C. Gravino *bold*
Researcher

Melody D. Sedanto *bold*
Researcher

In accordance with the Data Privacy Act of 2012 (Republic Act No. 10173), all information collected through this questionnaire will be treated with the utmost confidentiality and will be used solely for academic and research purposes. Your identity will remain anonymous, and the information you provide will not be disclosed to any unauthorized person or organization. The collected data will be securely stored and disposed of after the study's completion.

By completing this questionnaire, you indicate your voluntary consent to participate in this study.

Consent Declaration

- ☐ I have read and understood the Data Privacy and Confidentiality Statement.
- ☐ I voluntarily agree to participate in this research study.

Thank you for your valuable time and participation.

Noted by:

RICHARD NIEL B. PERALTA, MSIT *BOLD*
Capstone Adviser

ASSOC. PROF. MARY ANN ABALLIAR-VISTA, MEAM *BOLD*
Academic Adviser

Survey Questionnaire

Part I. Respondent Profile

Instructions: Please provide the following information by filling in the data or putting a (✓) next to your response.

Name: (Optional) _____

Role: ☐ IT Expert ☐ IT Practitioner

Position/Job Title: _____

Years of IT Experience:

☐ 5–7 years ☐ 8–10 year ☐ More than 10 years

Part II. System Evaluation (ISO 25010)

Instructions: To indicate your agreement level that best describes how you evaluate the system based on ISO 25010 software quality characteristics, put a (✓) in the box that next to each statement below using the coded scale for your response.

Scale and Interpretation

Scale	Interpretation	Description
4	Highly Acceptable	The system fully meets the evaluation criterion and performs exceptionally well.
3	Acceptable	The system meets the evaluation criterion and performs satisfactorily.
2	Less Acceptable	The system partially meets the evaluation criterion and requires improvement.
1	Not Acceptable	The system does not meet the evaluation criterion and requires significant improvement.

continuous Header

INDICATOR				
A. Functional Suitability :				
1. The system provides all the necessary functions for managing job orders, customer records, inventory, reports, and release schedules.				
2. Each module performs its intended function correctly without producing incorrect results.				
3. The machine learning feature provides service completion date predictions appropriate for the available job order information.				
4. The data analytics dashboard provides the information needed for monitoring sales, services, and business performance.				
5. The available system functions support Shoelotskey's daily business operations efficiently.				
B. Performance Efficiency :				
1. The system loads pages and modules within an acceptable response time.				
2. Job order processing and saving transactions are completed without noticeable delays.				
3. Reports and analytics are generated efficiently even with a large number of records.				
4. The machine learning prediction is generated within a reasonable amount of time.				
5. The system maintains good performance while multiple modules are being used.				
C. Compatibility :				
1. The system operates properly on commonly used web browsers.

INSTITUTE OF COMPUTER STUDIES

2. Information entered in one module is correctly reflected in related modules.				
3. The database exchanges information correctly with all system modules.				
4. The machine learning component integrates properly with the job order management module.				
5. The analytics dashboard accurately displays information gathered from the operational modules.				
D. Interaction Capability	4	3	2	1
1. The menus, icons, and buttons are clearly labeled and easy to recognize.				
2. I can easily learn how to perform job order, inventory, and customer management tasks.				
3. The system helps users avoid mistakes by providing clear prompts and confirmation messages.				
4. The layout and navigation make it easy to move between different modules.				
5. The system provides helpful messages and guidance whenever users need assistance.				
E. Reliability	4	3	2	1
1. The system performs consistently without unexpected interruptions during operation.				
2. Customer, inventory, and transaction records remain accurate after being saved.				
3. The system can recover successfully after unexpected errors or interruptions.				
4. The system continues to operate properly when processing multiple transactions.

Survey Questionnaire

Part I. Respondent Profile

Instructions: Please provide the following information by filling in the data or putting a (✓) next to your response.

Name: (Optional) _____

Position at Shoelotskey: ☐ Owner ☐ Staff

Part II. Technology Acceptance Model (TAM) Evaluation

Instructions: Please read each statement carefully. Put a (✓) in the box that best shows how much you agree with each statement based on your experience using the Web-Based Service Management System for Shoelotskey Villamor-Pasay"

Scale	Interpretation	Description
4	Highly Acceptable	The system fully meets the evaluation criterion and performs exceptionally well.
3	Acceptable	The system meets the evaluation criterion and performs satisfactorily.
2	Less Acceptable	The system partially meets the evaluation criterion and requires improvement.
1	Not Acceptable	The system does not meet the evaluation criterion and requires significant improvement.

A. Perceived Usefulness (PU)	4	3	2	1
1. The system helps me finish my work faster.				
2. The system makes it easier to manage customer records and job orders.				
3. The system helps me keep track of inventory and services more easily.
